

Cover: Representative super-resolution image showing the actin cytoskeleton of a Cos-7 cell stained with Alexa-Fluor-647-labelled Phalloidin, from Leyton-Puiget et al.'s Methods & Techniques paper on page 1001 describing a new PFA fixation technique that enables artifact-free super-resolution imaging of the actin cytoskeleton. Protruding lamellipodia and filopodia, as well as dorsal ruffles, are visible at the edges. Stress fibers and thin actin filaments are prominent in the cell body. Image provided by M. Innocenti and licensed under a Creative Commons Attribution 4.0 International licence.
